

# Patient Safety Indicator 08 (PSI 08) In Hospital Fall with Hip Fracture Rate

**June 2017** 

**Provider-Level Indicator** 

Type of Score: Rate

#### Prepared by:

Agency for Healthcare Research and Quality U.S. Department of Health and Human Services www.qualityindicators.ahrq.gov

#### **DESCRIPTION**

In hospital fall with hip fracture (secondary diagnosis) per 1,000 discharges for patients ages 18 years and older. Excludes cases that were admitted because of conditions that make them susceptible to falling (seizure disorder, syncope, stroke, occlusion of arteries, coma, cardiac arrest, poisoning, trauma, delirium or other psychoses, anoxic brain injury), have conditions associated with fragile bone (metastatic cancer, lymphoid malignancy, bone malignancy, cases with a principal diagnosis of hip fracture, cases with a secondary diagnosis of hip fracture present on admission, and obstetric cases.

[NOTE: The software provides the rate per hospital discharge. However, common practice reports the measure as per 1,000 discharges. The user must multiply the rate obtained from the software by 1,000 to report events per 1,000 hospital discharges.]

#### **NUMERATOR**

Discharges, among cases meeting the inclusion and exclusion rules for the denominator, with any secondary ICD-9-CM diagnosis codes for hip fracture.
